Dark Web Guardian™

MicroData®

Dark Web Guardian Monitors and Alerts you to Dark Web Compromises

92% of businesses tested in 2017 had key employee passwords and/or sensitive Personally Identifiable Information for sale on the Dark Web

Your business may have the latest firewalls, security suites, end-user training, and 24x7 monitoring, but it's all useless if someone has account information and a password and just logs in.

> "MicroData's comprehensive security focus was critical in assuring our customers and business partners that we were handling sensitive data securely."
>
> *Paul Butler, CFO*
> *Selective Micro Technologies*

Dark Web Compromises

Cyber criminals have learned that it's much easier to simply buy the information they need rather than craft an elaborate hack. And the Dark Web has become shopping market for cyber criminals where a wide range of compromised data is available for purchase including:

- **Network and computer account login credentials.** Imagine someone having your CEO or CFO's login info? With that in hand, access to everything else including bank data, personnel records, confidential corporate info, and customers lists is all readily available - and all without your even knowing you've been compromised.
- **Social Security numbers**
- **Banking, credit card, and financial account information**
- And a wide range of other protected **Personally Identifiable Information** (PII)

Manage Liability

Aside from the direct risks of finding your bank accounts drained (banks are not responsible for protecting from this type of theft), most states and the federal government now impose significant penalties and fines against organizations that fail to protect consumer and employee PII.

How Dark Web Guardian Works

Within 24-hours of implementing Dark Web Guardian, you will receive an initial Dark Web scan which lists all found compromises. This lets your IT staff get to work right away addressing issues. Then you'll receive daily alerts and monthly reports to let you know when any new compromises are found. Dark Web Guardian runs entirely at MicroData's data center - no software needs to be installed at your organization.

Affordable

MicroData's Dark Web Guardian is $199/mo for coverage of up to 100 users and an unlimited number of alerts. For an enviroment of more than 100 users, please call us for a price quote.

Call us today at 800.924.8167 for more information or to get your coverage started immediately.
